Concepts: API, Object Oriented Programming, Data Structure & Algorithm

Developer Tools & Databases : Git & Github, Postman, Mongo DB, MySQL

Projects

Clever-Code | *React js, node js* ([Github](#)) ([Link to Project](#))

- Developed a platform for competitive programmers to practice problems based on peers' solved sets, leveraging the Codeforces API for real-time problem and submission data.
- Implemented features like Smart Problem Recommendations (personalized by rating tags) and Topic Mastery Graphs to track progress and guide contest preparation.

Book-Shop | *React js, FireBase* ([Github](#))

- Developed the BookShop platform, for purchasing book directly from our website during our College Fest.
- Additionally, the platform will seamlessly integrate PayPal and credit card payments, among other advanced functionalities. This comprehensive approach ensures a user-friendly and efficient shopping experience.

PostPuls | *Python, Django, SQL, Tailwind* ([Github](#))

- Built a full-featured blogging platform using Django, SQL, and Tailwind CSS, allowing users to create, manage, and interact with blog content seamlessly.
- Integrated Gemini AI to enhance functionality by providing automated blog summaries and generating relevant key points for improved user engagement.

Achievements

Codeforces : Reached rating 1100+

Leetcode : Solved over 200+ problems on Leetcode
